

Industrial & Advanced Technology Semiconductors

Building Long Term Relationships

Building long-term relationships with our clients is a cornerstone of CH2M HILL's mission. To that end, we bring a partnering approach — the right people and the right process — to each client and every project. We pay particular attention to a region's attributes and assets, and collaborate closely with clients, business, and government to bring the most challenging technical projects to fruition.

Consistent Global Project Delivery — With locations worldwide, we provide a wealth of global resources. CH2M HILL operates under unified strategic direction and supports a common communications infrastructure, allowing us provide our expertise wherever you need it most. Over the past 30 years, CH2M HILL has delivered more than 250 semiconductor projects around the world.

Regulatory Compliance — CH2M HILL understands the practical application of worldwide regulatory requirements. We apply this knowledge to every aspect of a project, from production equipment and piping design to movement of personnel and material, control of environmental conditions, and selection of construction materials.

Liability Management — We bring a comprehensive understanding of environmental regulations in every country where our clients operate. By addressing environmental impacts in the context of our clients' evolving needs, we provide integrated solutions to help manage assets and liabilities.

Demonstrated Results — CH2M HILL's full-service solutions add value at every level, from accelerated schedules and cost reductions to reduced contractual risks and greater community acceptance of the project. Our performance has consistently earned repeat business from the industry's leading manufacturers.

Deep Resources, Full Service Solutions

CH2M HILL's global-scale leadership helps our semiconductor clients move from initial planning and design to final operation and production. Our strength is the knowledge and experience of our employees, who have successfully delivered the world's most complex and challenging fab projects.

With more than 25,000 professionals operating in locations worldwide, CH2M HILL is regionally based to serve a diverse range of markets across the globe. As an employee-owned company with revenues of over \$6 billion (2008), we are a stable, trusted industry partner.

Maximizing Return on Investment

From economical building shells to major manufacturing complexes, CH2M HILL's design-build approach helps semiconductor clients maximize the return on their investment. Our collaborative process recognizes each client's unique needs and expectations, and identifies innovative solutions that deliver extraordinary value. Our integrated project delivery is structured to meet aggressive market-driven schedules, anywhere in the world.

Front-End Planning

CH2M HILL's front-end engineering and design (FEED) program provides critical analysis and pre-planning to help clients determine operations expansion, world-wide product manufacture and execution, and cost of goods. These services support corporate funding definition, and provide certainty for clients in moving forward with business plans. Our unique site selection team provides financial/feasibility analysis and cost modeling of different locations and incentives, to create a solid foundation for business planning.

Seamless Execution

Meticulous planning and pragmatic, constructible design allows a seamless transition to efficient field execution, with a focus on safe facilities, economical operation, environmental protection, and future expansion.

Construction Management

CH2M HILL's Construction Management (CM) — proven on more than 1,500 projects during the past five years — effectively manages construction services and resources to complete projects on schedule and budget. Our CM approach provides a single point of contact, representing the owner's interests first and foremost.
