Driveline Manufacturing Plant

American Axle & Manufacturing presented CH2M HILL its 2007 supplier recognition award for the company's work on AAM's state-of-the-art driveline plant in Changshu, China. AAM honored CH2M HILL for "outstanding contributions as a valued supplier partner."

This client selected CH2M HILL to provide a broad range of engineering, procurement and construction services for the \$90 million facility that makes driveline axles, chassis systems, forgings, and other precision components for the automotive industry.

CH2M HILL was responsible for overall program management and site safety. No lost time or recordable injuries were reported during construction.

The company completed the project within budget and on a tight schedule, allowing product launch within eight months from groundbreaking.

AAM is one of many U.S.-based Tier 1 suppliers that have selected CH2M HILL to design and build facilities in Asia.
