## Wallboard Manufacturing Facility

CH2M HILL provided engineering, procurement, and construction services for American Gypsum's 720,000 ft<sup>2</sup> wallboard manufacturing facility. CH2M HILL's scope of services included site preparation, building foundations and slabs, steel and building erection, all utilities, process equipment installation, utility hookups, and startup.

The plant recycles byproducts from a nearby power station into high quality synthetic gypsum for the manufacture of wallboard. The manufacturing complex includes a 350,000 ft<sup>2</sup> finished product warehouse as well as administrative offices. The complex also has a vehicle and equipment maintenance facility to support the repair and maintenance of plant equipment.
