Client

TPS International Power, Inc.

Location

San Jose, Guatemala

San Jose Power Station

Project Description

CH2M HILL is the EPC contractor, in joint venture with Black & Veatch, for all services associated with a 120 MW pulverized coal-fired power plant. This was the first coal-fired plant built in Central America and the largest electrical generating facility in the country. Located in a port area, the project scope included construction of a fuel unloading and storage facility as well as harbor dredging and construction of a berthing facility for the coal transport ships.
