Los Angeles, CA, USA

Los Angeles World Airports Security Analysis & Implementation

Project Description

CH2M HILL managed a security analysis and implementation program for Los Angeles World Airports (LAWA), addressing security concerns surrounding all aspects of the airport's operations, including terminal facilities, cargo and landside operations, perimeter and airside security, and ancillary facilities protection. We implemented security features and devices throughout the airport to meet or exceed guidelines provided by LAWA and the Aviation and Transportation Security Act, without reducing the level of service to customers while delivering our services. We also developed a long-range security infrastructure implementation plan for the client.
