Facility Services for General Motors de Mexico's Administrative Complex

Project Description

GLG Ingenieria International, S.A.de C. V, CH2M HILL Lockwood Greene's Mexican subsidiary, provided the following services for a 150,000sf greenfield office building complex in central Mexico City:

- Master planning
- Permitting
- Preliminary engineering studies
- Architectural design
- Structural, electrical, HVAC, and mechanical design
- Construction management

Program Elements

- GLG's bilingual capabilities and knowledge of cultural differences enabled easy communication with General Motors.
- Knowledge of local building codes allowed for a fast-track project completion, resulting in cost savings for General Motors.
- On-site immediate assistance reduced travel and expenditure requirements, enabling General Motors to carry on normal business practices.

Features

The scope of services provided by GLG includes the following:

- Development of the basic engineering for wastewater treatment process
- Development of the detailed engineering required for preparation of drawings, specifications, bill of materials, and all documents related to the bid packages
- Follow-up engineering for a time span of 15 months
- Supporting control systems and assisting General Motors with common system architecture
