Alpargatas Office Building

Project Description

In this adaptive reuse and system replacement project, CH2M HILL Lockwood Greene turned a textile factory into an office building incorporating sustainable design, energy efficiency, and barrier-free accessibility.

Alpargatas is a traditional textile firm located in a neighborhood named after the warehouses which are its most common feature. Needing additional office space, one of its strategically located warehousing buildings was refurbished. The final build-out covered 7,200 square meters. The project included office space, training rooms, conference rooms, kitchen and restaurant, gym, and parking space.
