Exxon Campana Refinery – Engineering, Maintenance, and Site Supervision

Project Description

CH2M HILL Lockwood Greene provides engineering and maintenance projects and site supervision on the Exxon Refinery in Campana.

The Exxon refinery in Campana has been working since the early 1900s. Since its acquisition by Exxon Mobil over 90 years ago, it has been adding new plants and facilities. CH2M HILL Lockwood Greene provides engineering and maintenance projects and site supervision on the site. A dedicated staff of approximately 50 people provides onsite services and interacts on a daily basis with the Exxon engineering and maintenance team. The refinery requires numerous, continuous services, special projects, and services related to plant stops. Part of the office personnel work onsite in ongoing works related to maintenance, spare parts, and site supervision. Special projects require different stages of budgeting, design, and approval if completed construction documents are issued. Support is provided as required during plant stops.
