Argentina and Perú

## YPF-Repsol, Renewal and Upgrading of Filling Stations, Argentina and Perú

### Project Summary

For more than a decade, CH2M HILL Lockwood Greene has been working with YPF Repsol to continually upgrade and renew its facilities.

### Project Description

Since 1993, CH2M HILL Lockwood Greene has been working with YPF Repsol in a continual renewal and upgrading of its sales points and customer service facilities. CH2M HILL Lockwood Greene has partnered with YPF through a series of company changes and acquisitions.

In the 1990s, YPF launched a groundbreaking project that included a dramatic change in corporate image, high-tech design and materials at the sales points, high-visibility locations, and an upgrade in all installations complying with the most stringent international norms.

CH2M HILL Lockwood Greene has worked with YPF-Repsol in over 300 locations all over Argentina, including agricultural-and industry-dedicated fillings stations, lubricant facilities, mini-markets, and convenience stores.

As part of its expansion policy, YPF went international. CH2M HILL Lockwood Greene has accompanied this undertaking. Over 20 projects site adaptations, detail engineering, and construction management were carried out in Perú including and airport filling stations.
